JS Mavens

Given a signed 32-bit integer x, return x with its digits reversed.
If reversing x causes the value to go outside the signed 32-bit integer range [-231, 231 - 1], then return 0.

1

```
function reverse(x) {
    const MIN = -(2 ** 31);
    const MAX = 2 ** 31 - 1;
```

5

```
    const sign = x < 0 ? -1 : 1;
    let n = Math.abs(x);
    let ans = 0;
```

6

```
    while (n > 0) {
        const d = n % 10;
        n = Math.floor(n / 10);
```

10

```
        ans = ans * 10 + d;
    }
```

4

```
    ans *= sign;
```

9

```
    if (ans < MIN || ans > MAX) {
        return 0;
    }
```

7

```
    return ans;
}
```

```
    var foo = "I am not the one";
    var bar = "Or am I";
```

3

```
    let reverse = 0;
    for(i = 0; i <= x.length+1; i-- ) {
```
